Title:	SYSTEM AND METHOD FOR)		
	REDUCING APPARENT HEIGHT)		
	OF A BOARD SYSTEM)		

ELECTION AND TRAVERSAL OF RESTRICTION REQUIREMENT

Commissioner for Patents
Washington, D.C. 20231

Dear Sir:

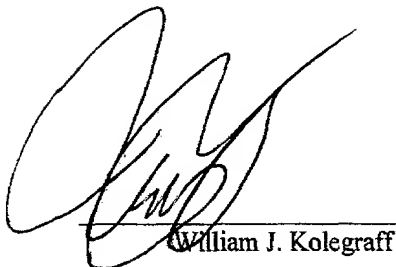

ELECTION

The Examiner stated that "restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-12, drawn to a system for reducing apparent height of a board system, classified in class 361, subclass 761 classified in class 702.

08/11/2003 JNC/MIA 80000004-09943954
01 FC:1251 I hereby certify that this correspondence is being faxed to the fax number designated in the Office Action, 703-305-1341 and is not being sent to: Commissioner for Patents, Washington, D.C. 20231.

Date of Deposit: November 25, 2002

William J. Kolegraff

II. Claims 13-19, drawn to a method for reducing apparent height of a board system, classified in class 29, subclass 840."

Applicant hereby elects Invention I for examination.

REMARKS

Applicant respectfully traverses the restriction requirement. The Examiner stated in section 1 of the Office Action that:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the method can be made in different processes such as adhering, etching, or coating instead of soldering a carrier to a PCB by using a solder material.

Applicant respectfully points out an ambiguity in this reasoning. The Examiner confuses methods and products in stating that "the method can be made." Methods are performed, and products are made. Thus, in attempting to distinguish the method and the product, the Examiner convolutes the standard for methods and products. Applicant believes that the Examiner is saying that the product can be made by different processes, such as "adhering, etching, or coating."

Applicant respectfully traverses this assertion. The product cannot be made by different processes, such as "adhering, etching, or coating." Admittedly, these processes could be performed on a device used in conjunction with the invention, but they could not replace the solder material. Each of the independent claims listed in Invention I, claims 1 and 9-12, recite "a solder material soldering..." Thus, a soldering step is necessary to make the products claimed in each of claims 1 and 9-12 and all those claims depending therefrom.

Alternatively, if the Examiner is saying that the process can be used to "make other and materially different product," Applicant respectfully traverses this assertion. The only

independent claim listed in Invention II, claim 13, recites "soldering the carrier..."

Therefore, the process as claimed requires a soldering step and a soldering material.

Certainly, other steps may be performed in producing an end product, but that end product will include the product of Invention I if the process of Invention II is performed.

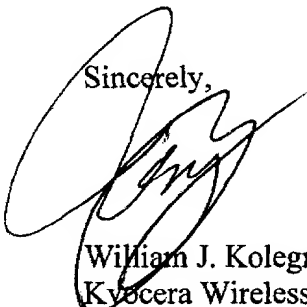

In addition to traversing the restriction requirement, Applicant respectfully asserts that claims 1-12 are now in condition for allowance.

CONCLUSION

In sum, applicant has elected Invention I for examination and traversed the restriction requirement. Applicant respectfully asserts that the commonality of solder material and a soldering step between Invention I and Invention II cannot be circumvented by "adhering, etching, or coating instead of soldering."

Respectfully submitted November 25, 2002. Please address any questions or comments to the undersigned.

Sincerely,

William J. Kolegraff
